Entry of Amendment

Applicant's amendment filed on Sep. 5, 2007 is acknowledged. Claims 2-4, 6, 7, 10-14, 19-24 and 26 are currently pending.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 2-4, 6-7, 10-14 and 26 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The words "liquid" and "cavity" do not appear in the Specification and there is no drawing showing a cavity substantially disposed within the non-metallic positioning element and in fluid communication with an inner surface of the heat transfer element, i. e. this is "new matter".

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Application/Control Number: 10/736,191

Art Unit: 3739

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 10, 14 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Brown (3,782,366). Brown discloses an apparatus comprising:

a self-contained portable hand-held unit (Figure 1), comprising:

a heat transfer element (16) having a surface configured to be positioned in close proximity to a suspected area of infection;

a non-metallic positioning element (10) configured to be grasped by a user; and a thermal energy source (copper tank # 18) comprising liquid butane under pressure and substantially disposed within the non-metallic positioning element and in fluid communication with an inner surface of the heat transfer element; wherein the surface of the heat transfer element is configured to a shape of a target area; and further comprising an insulating element (insulating plastic surrounding tube 12 and col. 1, line 66-col. 3, line 2).

Allowable Subject Matter

Claims 19-24 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roy D. Gibson whose telephone number is 571-272-4767. The examiner can normally be reached on Tu-Th, 7:30 am-4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda Dvorak can be reached on 571-272-4764. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000
